ClaimGuard

Compliance monitoring for brands
that cannot afford surprises.

Investor Product Overview

Rules-engine compliance workspace for food, supplement, and wellness brands

Prepared June 13, 2026

github.com/Yatharth10-bit/claimguard | Public Beta

Educational guidance only — not legal advice

Executive Summary

1,000	Validated claim scenarios
33	Official regulator sources
16	Regulatory bodies
32+	Product sectors

ClaimGuard is a B2B SaaS compliance workspace that helps food, supplement, and wellness brands identify risky marketing claims *before* they reach customers, regulators, or platform reviewers. Unlike generic AI chatbots, ClaimGuard uses a deterministic rules engine validated across 1,000 product scenarios — every risk flag is explainable and linked to official FDA, FTC, FSSAI, and global guidance.

The problem: Supplement and wellness brands publish thousands of claims across websites, Amazon, ads, influencers, and labels. One disease claim or unsubstantiated promise can trigger FTC action, FDA warning letters, platform ad rejection, or costly legal review (\$300+/hour). Most small brands lack in-house regulatory affairs teams.

The solution: ClaimGuard provides instant claim-risk analysis, safer rewrites, regulation monitoring, remediation workflows, audit trails, and investor-grade reporting — starting free and scaling to \$99/mo for unlimited compliance operations.

How ClaimGuard Works

ClaimGuard follows a repeatable compliance loop designed for non-experts and lean teams:

Analysis pipeline: User pastes claim text and selects publishing context (label, website, Amazon, ad, social, influencer script). The rules engine matches phrase patterns against category-specific regulations, computes a 0–100 risk score, identifies triggering phrases, generates a safer rewrite, attaches official source references, and produces a practical review checklist. Results save to the claim library with full audit history.

Platform Features

Module	Tier	Description
Claim Checker	All plans	Single-claim analysis with risk level (low/medium/high), score, risky phrases, explanation, safer rewrite, checklist, and FDA/FTC source links.
Copy Scanner	Guard+	Paste full website, Amazon, social, or email copy. Splits into claim-like sentences and batch-analyzes each against plan limits.
Product Workspace	All plans	Track products by category, market, platforms, ingredients, and marketing copy. Product caps enforced per tier.
Regulation Feed	All plans	Curated official updates from FDA, FTC, FSSAI, EPA, EU, UK, Canada, Australia — 33 sources across 16 regulators.
Impact Matching	All plans	Rule-based engine connects regulation updates to your products and saved claims with recommended actions.
Claim Library	All plans	Searchable record of original claims, safer versions, status workflow, and evidence panels.
Task Board	Guard+	Kanban workflow: Needs Review → Fixing → Expert Review → Fixed → Approved.
Reports & PDF	Guard+	Printable compliance reports with risk breakdown, rewrites, sources, and checklist.
Audit Trail	Guard+	Timestamped log of claim checks, edits, approvals, task changes, and exports.
Weekly Digest	Shield+	Personalized digest based on brand profile, sales regions, products, and impacts.
SOP Generator	Shield+	Auto-generates step-by-step compliance SOPs for flagged claims with escalation rules.
Compliance Copilot	Shield+	Ask why a claim was flagged, get guided fixes, channel-specific rewrites (Amazon, Meta, Instagram, influencer, email).
Brand Onboarding	All plans	Flashcard onboarding captures sector, regions, channels, ingredients, and first claim for personalization.
Usage & Billing	All plans	Plan limits enforced server-side. Dodo Payments checkout, subscriptions, trials, and customer portal.

Compliance Copilot (Shield+)

The Compliance Copilot is a scoped assistant — not a generic chatbot. It operates only on analyzed claim context and provides three deterministic capabilities:

- **Explain (Ask Why):** Breaks down each risky phrase with severity, regulatory explanation, and linked official sources.
- **Help Me Fix:** Guided remediation steps tailored to product category, market, and publishing channel.
- **Channel Rewrites:** Transforms safer baseline copy for Amazon bullets, Meta ads, Instagram captions, influencer scripts, and email subject lines.
- **Regulation Impact Explainer:** Translates official updates into product-specific impact assessments.
- **SOP Generator:** Produces documented standard operating procedures for team-wide compliance consistency.

Rules Engine & Validation

ClaimGuard deliberately avoids black-box LLM analysis for core risk scoring. The deterministic engine ensures reproducibility, explainability, and investor-grade reliability.

Component	Detail	Investor relevance
Phrase rules	Category-aware pattern matching for disease claims, false FDA approval, absolute safety, pesticide language, substantiation gaps	Predictable, auditable, no API cost per scan
Rewrite engine	Rule-based safer wording transformations preserving intent	100% high-risk rewrite safety in regression
Source linking	Every flag connects to curated official regulator guidance	Trust and defensibility vs. AI hallucination
Regression suite	1,000 expanded cases (100 base x 10 context variants) across 32+ sectors	Quality moat; continuous CI validation
Copilot training	train:copilot pipeline learns from regression outcomes	Improves explanations without changing core scores

Test commands: npm run test:expanded (1000/1000), test:products (100/100), test:plans, train:copilot

Regulatory Intelligence

ClaimGuard maintains a curated knowledge layer from official sources only — not arbitrary web scraping.

- **Markets:** United States, India, European Union, United Kingdom, Canada, Australia
- **Regulators:** FDA, FTC, EPA, USDA, CPSC, TTB, CFPB, FSSAI, European Commission, GOV.UK, MHRA, CFIA, Health Canada, TGA, ACCC
- **Sectors:** Food, beverages, supplements, cosmetics, drugs, medical devices, pet products, cleaners, pesticides, children's products, alcohol, financial services, software, environmental claims
- **Live sync:** Selected FDA, FTC, and FSSAI update hubs; remaining catalog seeded as stable reference guidance
- **Personalization:** Brand profile filters regulation feed, digest, and impact matching by sales regions and sector

Technology Architecture

Layer	Stack	Notes
Frontend	Next.js 15, React 19, TypeScript, Tailwind CSS	Responsive app + marketing site with light/dark/contrast themes
Backend	Next.js API routes, Zod validation	analyze, scan-batch, copilot, digest, sop, usage, billing, feedback
Database	Supabase PostgreSQL + RLS	Products, claims, tasks, audit events, usage counters, subscriptions
Auth	Supabase Email/Password	Protected routes with middleware; dev fallback for local testing
Billing	Dodo Payments	Checkout sessions, webhooks, customer portal; Guard/Shield tier mapping
Deployment	Vercel-ready	Edge-compatible; environment-based configuration
Rate limiting	In-memory per-user burst limits	Production upgrade path: Redis for horizontal scale

API surface: /api/analyze, /api/scan-batch, /api/copilot, /api/digest, /api/sop, /api/usage, /api/products, /api/billing/*, /api/feedback, /api/webhooks/dodo

Business Model & Pricing

Price anchor: Less than one consultant hour (\$300) buys six months of ClaimGuard Shield (\$99/mo). **Founding offer:** First 50 US brands lock Guard at \$29/mo for life.

Plan	Price (US)	Products	Key capabilities
Radar (Free)	\$0	1	5 scans/mo, risk score, safer rewrites
Guard	\$39/mo	3	30 scans, copy scanner, task board, PDF export
Shield	\$99/mo	15	Unlimited scans, digest, SOP, copilot, audit trail
Agency	\$299/mo	50	Multi-brand, 10 seats, priority support
Enterprise	From \$799/mo	Custom	SSO, API, FSSAI/EU packs, custom SLAs

Monetization mechanics: Freemium Radar drives top-of-funnel. Usage caps (scans, products) create natural upgrade triggers. 7-day trials on paid tiers. 20% annual discount. Multi-currency pricing for US, India, UK, EU, Canada, Australia, Singapore, UAE.

Market Opportunity

TAM: 50,000+ DTC supplement and functional food brands in the US alone; growing India wellness market; global cosmetics and clean-label food segments. Every brand publishing health-adjacent claims is a potential customer.

Target segments (priority order):

- DTC supplement founders (1–5 products, no regulatory team)
- Amazon/marketplace wellness sellers
- Small food & beverage brands launching new SKUs
- Compliance consultants and agencies (multi-client Shield/Agency)
- Influencer-heavy wellness brands needing script review

Competitive differentiation:

- Deterministic rules engine vs. opaque AI compliance tools
- End-to-end workflow (check → fix → track → report) vs. point-solution checkers
- Affordable pricing (\$39–\$99) vs. enterprise-only compliance platforms
- 1,000-case validated accuracy with public regression transparency
- Official source evidence on every flag — built for responsible review, not legal replacement

Roadmap & Traction Metrics

Phase	Timeline	Milestones
Now (Beta)	Q2 2026	Public beta, plan enforcement, copilot, 1K regression, Dodo billing live
Growth	Q3 2026	Shopify integration, email nurture, agency referral program, 50 founding customers
Scale	Q4 2026	FSSAI India GTM, EU compliance pack, Redis rate limits, team seats
Enterprise	2027	SSO, API access, custom SLAs, white-label for agencies

Key Metrics to Track

WAU	Weekly active users
Activation	Signup → 1st scan
MRR	Monthly recurring revenue
NRR	Net revenue retention

- Landing → signup conversion (target 8–15%)
- Free → paid conversion within 30 days (target 4–8%)
- Claims scanned per active user per week
- Upgrade rate when hitting Radar scan limits
- Agency referral pipeline and multi-brand accounts

Investment Thesis

ClaimGuard sits at the intersection of three durable trends: (1) exploding DTC wellness commerce, (2) increasing FTC/FDA enforcement on health claims and influencer marketing, and (3) demand for affordable compliance tooling as brands globalize across US, India, and EU markets.

The product is built, validated, and billing-ready. Capital accelerates go-to-market (founder-led outbound, agency partnerships, content SEO, and India expansion) rather than core R&D; risk.

ClaimGuard
